Assignment -2

Assignment Date	04 November 2022
Student Name	S.Ramchandru
Student Roll Number	923319104044

Question-1:

Build a python code, Assume you get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution:

```
import random

def temperature():
    value=random.randint(25,100)
    return value

t=temperature()

def humidity():
    range=random.randint(40,100)
    #print(range)
    return range

h=humidity()

#for temperature

if t>30:
    print("High temperature detetcted")
elif t==30:
    print("Temperature reached maximum threshold of 30 degrees celsius")

else: print("Temperature is
good")

#for Humidity

if h>65 :
```

```
print("High humidity detetcted") elif
t == 65:
    print("Humidity reached maximum threshold of 65 percent")
else:
    print("Humidity is good")
```

```
1 import random
2 def temperature():
3     value=random.randint(25,100)
4     #print(value)
5     return value
6 t=temperature()
7 def humidity():
8     range=random.randint(40,100)
9     #print(range)
10    return range
11 h=humidity()
12 #for temperature
13 if t>30:
14     print("High temperature detetcted")
15 elif t==30:
16     print("Temperature reached maximum threshold of 30 degrees celsius")
17 else:
18     print("Temperature is good")
humidity()
```

Run: main

"C:\Users\Mr. Jagan\PycharmProjects\ceasor1\venv\Scripts\python.exe" "C:\Users\Mr. Jagan\PycharmProjects\ceasor1\main.py"

High temperature detetcted

Humidity is good

Process finished with exit code 0
